

DATASHEET Antiflood V

Antiflood V is a control system that is used for average water flow, average water pressure and rising water. It works using the gravity of the water, pushing and holding the system on the ground.

Provides protection for: industries, civil protection, military units, rescue teams, regions, municipalities

It consists of separate pieces which can be tied together in three points.
 The system v can be used either to divert water or to enclose a specific area.
 There are also available special corner pieces to create the arrangement you need.
 The pieces have high-strength rubber at the bottom and on the connection surface between them to provide better insulation.
